MISSION
Urology Practice focuses on clinical trends, challenges and practice applications in the four areas of Business, Health Policy, the Specialty and Patient Care. Information that can be used in everyday practice will be provided to the Urology community via peer-reviewed clinical practice articles (including best practices, reviews, clinical guidelines, select clinical trials, editorials and white papers), “research letters” (brief original studies with an important clinical message), the business of the practice of urology, urology health policy issues, urology education and training, as well as content for urology care team members.

CONTENT AND CATEGORIES
Original work published in Urology Practice includes primary clinical practice articles and addresses a wide array of topics categorized as follows:

Business of Urology — articles address topics such as practice operations and opportunities, risk management, reimbursement (Medicare, Medicaid and private insurers), contracting, new technology and financial management.

Health Policy — articles address topics such as organization, financing and delivery of health care services from governmental and private payer policy perspectives, governmental and legislative activities influencing urology care, government affairs and policy analyses.

the Specialty — articles address topics such as education and training, ABU certification, implementation of clinical guidelines and best practices across all subspecialty societies within urology and all specialty areas outside urology relative to contributions to the practice of urology.

Patient Care — articles address topics such as treatment choices, best practices, reviews, detailed analysis of clinical guidelines, evidence-based quality of care, select clinical trials, clinical implications of basic research, international health care and content for urology care team members.

MANUSCRIPT SUBMISSION
Authors must submit their manuscripts through the Web-based tracking system at https://www.editorialmanager.com/UP. The site contains instructions and advice on how to use the system, guidance on the creation/scanning and saving of electronic art, and supporting documentation. In addition to allowing authors to submit manuscripts on the Web, the site allows authors to follow the progression of their manuscript through the peer review process.

PEER REVIEW
All content is peer reviewed using the single-blind process in which the names of the reviewers are hidden from the author. This is the traditional method of reviewing and is, by far, the most common type. Decisions to accept, reject or request revisions are based on peer review as well as review by the editors.

JOURNAL ETHICS
Urology Practice expects the highest ethical standards from their authors, reviewers and editors when conducting research, submitting papers and throughout the peer review process. Urology Practice is listed among those journals that follow the Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals of the International Committee of Medical Journal Editors (ICMJE) (http://www.icmje.org/recommendations/).

Redundant or Duplicate Publication — Duplicate or redundant publication is a publication that overlaps substantially with one already published, in press or in an electronic media submission. (ICMJE. http://www.icmje.org/recommendations/browse/publishing-and-editorial-issues/overlapping-publications.html)

Duplicate or redundant submission is the same manuscript (or the same data) that is submitted to different journals at the same time. International copyright laws, ethical conduct and cost-effective use of resources require that readers can be assured that what they are reading is original. (ICMJE. http://www.icmje.org/recommendations/browse/publishing-and-editorial-issues/overlapping-publications.html)

Submitted manuscripts should not have been published or currently submitted elsewhere. Duplicate publication will be grounds for prompt rejection of the submitted manuscript. If the editor was not aware of the violation and the article has been published, a notice of duplicate submission and the ethical violation will be published.

Conflicts of Interest — At the point of submission, policy requires that each author reveals any financial interests or connections, direct or indirect, or other situations that might raise the question of bias in the work reported or the conclusions, implications or opinions stated, including pertinent commercial or other sources of funding for the individual author(s) or for the associated department(s) or
organization(s), personal relationships or direct academic competition.

If the manuscript is accepted, Conflict of Interest information will be communicated in a published statement.

**Permissions to Reproduce Previously Published Material** — For permissions to reproduce, please see the license under which the individual article has been published. Articles published in *Urology Practice* are copyrighted by the society owner: American Urological Association Education and Research, Inc.

**Patient Consent Forms** — The protection of a patient’s right to privacy is essential. Please collect and keep copies of patients’ consent forms on which patients or other subjects of your experiments clearly grant permission for the publication of photographs or other material that might identify them. If the consent form for your research did not specifically include this, please obtain it or remove the identifying material.

A statement to the effect that such consent had been obtained must be included in the Materials and Methods section of your paper. If necessary the editors may request a copy of any consent forms.

**Ethics Committee Approval** — All articles dealing with original human or animal data must include a statement on ethics approval. For studies conducted on human participants you must state clearly that you obtained written informed consent from the study participants; please also look at the latest version of the Declaration of Helsinki. Institutional review board, including the IRB number, ethics committee or ethical review board study approval must be stated in the manuscript. If ethics clearance was not necessary, or if there was any deviation from these standard ethical requests, please state why it was not required. Please note that the editors may ask you to provide evidence of ethical approval. If you have approval from a National Drug Agency (or similar) please state this and provide details, as this can be particularly useful when discussing the use of unlicensed drugs.

Journal ethics policy statements for authors to complete can be found on the Author Submission Requirement form attached at the end of the Instructions for Authors (https://www.editorialmanager.com/lu/account/JURO_IFA-proof.pdf).

**DISCLAIMER**

The statements and opinions contained in the articles of *Urology Practice* are solely those of the individual authors and contributors and not of the American Urological Association Education and Research, Inc. or Wolters Kluwer Health, Inc. The appearance of the advertisements in *Urology Practice* is not a warranty, endorsement or approval of the products or services advertised or of their effectiveness, quality or safety. The content of this publication may contain discussion of off-label uses of some of the agents mentioned. Please consult the prescribing information for full disclosure of approved uses. To the extent permissible under applicable laws, no responsibility is assumed by the publisher and by the AUA for any injury and/or damage to persons or property as a result of any actual or alleged libelous statements, infringement of intellectual property or privacy rights, or products liability, whether resulting from negligence or otherwise, or from any use of operation, ideas, instructions, procedures, products or methods contained in the material therein.
